Examiner's Detailed Office Action

Claim Rejections - 35 USC § 101

1. Upon further review, the allowance of claims 26-31 is withdrawn. An action on the merits appears below.
2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
3. Applicant's invention disclosed in claims 26-31 is directed to nonstatutory subject matter. Claims 26-28 are considered to be an *abstract idea*. It is the examiner's position applicant's invention as claimed is not limited to a *practical application* in the technological arts. While, the claims *appear* to be directed towards a method performed on a computer. However, examination has revealed no computer or computer-readable medium has been disclosed by applicant.
4. This deficiency can lead to speculation that applicant's invention may be implemented on paper or by some other means not associated with a computing device. Examiner will not speculate as to the intended meaning, and will leave that to applicant to further clarify, since

Art Unit: 2121

applicant discloses no “certain substances” that have been “transformed or reduced” that is, applicant claims disclose no *specific* computer or computer-readable medium.

5. Furthermore, there is no manipulation of *specific* data representing physical objects or activities constituting what one may classify as pre-computer activity, nor does applicant disclose any *specific* independent physical acts being performed by the invention constituting post-computer activity. As aforementioned, it is the examiner’s position the claims as presented are nonstatutory, and merely manipulate *abstract ideas* in general without limitation to a practical application whereby “certain substances” are transformed or reduced on a computer or a computer-readable medium.

6. As for claims 30 and 31, these claims are considered to be nonstatutory. Applicant’s claim to a signal bearing medium is considered to be broad enough to include a transient carrier wave which is not fixed in a tangible medium readable by a machine. For this reason, claims 30 and 31 are rejected.

7. Therefore, claims 26-31 are rejected under 35 USC § 101.

8. It should be noted that if claims 26-29 were amended to recite a “computer” or “computer implemented” method and apparatus the rejection under 35 USC § 101 would be withdrawn.

Conclusion

9. Office personnel are to give claims their “**broadest reasonable interpretation**” in light of the supporting disclosure. *In re Morris*, 127 F.3d 1048, 1054-55, 44 USPQ2d 1023, 1027-28 (Fed. Cir. 1997). Limitations appearing in the specification but not recited in the claim are not read into the claim. *In re Prater*, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-551 (CCPA

1969). See *also *In re Zletz*, 893 F.2d 319, 321-22, 13 USPQ2d 1320, 1322(Fed. Cir. 1989) (“During patent examination the pending claims must be interpreted as broadly as their terms reasonably allow. . . . The reason is simply that during patent prosecution when claims can be amended, ambiguities should be recognized, scope and breadth of language explored, and clarification imposed. . . . An essential purpose of patent examination is to fashion claims that are precise, clear, correct, and unambiguous. Only in this way can uncertainties of claim scope be removed, as much as possible, during the administrative process.”). *see* MPEP § 2106
